When you right click “Setup” the program will open and you can make changes to the program’s settings.

This is what the program settings page looks like:

On the program settings page, you need to move the “Subliminal Message Display Speed” slider to select the speed at which you wish the program to display the subliminal messages. If you move the slider too far to the right you won’t even notice the messages flashing on your computer screen. However, it’s important that you know for certain that the program is working so, move the slider to the left and click the Save Settings button.

THE MILLIONAIRE MIND SECRETS

You will start to notice the affirmations flashing on your screen at around the 6th notch as shown above. This is a good setting to use. However, you can move the slider further to the left, but if you select a low setting then the affirmations may become too noticeable and they could become distracting for you.

It's best if you select a speed where you can just about notice the affirmations but that they are too fast for you to be able to read them. Whenever you save the settings, the new settings will come into effect after a few seconds.

Pausing and Unpausing

You can pause the program whenever you need by right clicking the program's icon in the task bar and selecting "Pause Subliminal Messages. You can also resume again whenever you wish by selecting "Unpause Subliminal Messages".
